Winners In Wheat Competitions Distributed Widely Throughout Wheat Growing Area In West

The winners of Western Canadian Farmers' International wheat competition, within a period of sixteen years since the institution of the award in 1915, constitute one of the most impressive features in the history of Canadian agriculture. On three occasions, the Dominion representatives won against all North

west of those competitors in, first and second place, a tribute to the talent of the exhibitors. This worthy record is due more to the fact that it has been won by the west, and to the whole Dominion.

And it is a matter of gratification that such a record of success has not been monopolized within any

How Heavy Beans Water

Method of Keeping Warm In Storage and Wonderful

A farm boy visiting the Ontario Agricultural College during the recent cold snap was going through the seed vaults of the college. He was looking out of a rear window noticed the lines of the live and dead beans. He was curious to get the professor of his and asked Professor Miller how in the world the beans were kept.

Well that's a very interesting question," said the Professor, "and the answer is still more interesting.

"The individual the honey bee is a very interesting creature. It has been found that it can live in a temperature of 100 degrees Fahrenheit, but it has all power of movement and it is very lively, however, in the colony, they form a hollow chamber with a light web of bees forming an excellent insulator. Inside this hollow chamber the bees are moving freely and by rapid movements of the wings the bees can do maintain a temperature of 60 degrees Fahrenheit or more, even during the coldest winter months. The bees forming the colony, therefore, will be constantly changing places with the bees on the outside, and thus all keep warm.

Research work shows that they must have sufficient water. Beans are a colony to form a thick insulating web. It is a matter of fact that the farmer is trying to retain the heat of the seed.

"It is not generated."

"It is not generated, strange and wonderful, but Nature knows her job thoroughly."

Grain Stalk Causes Heavy Loss

Loss Of One Million Dollars Through Failure To Remove Stalks From Harvested Grain

Farmers of Western Canada, during 1928-29, lost one million dollars in grain because of the failure to remove stalks from harvested grain. The loss was caused by the failure to remove stalks from harvested grain. The loss was caused by the failure to remove stalks from harvested grain.

The work of the mill is threefold: it is to take out the seed, to clean the seed, and to store the seed. The mill is a very important part of the grain industry. The mill is a very important part of the grain industry.

It is a good plan to check over the fields to make sure that they have not been sown. It is a good plan to check over the fields to make sure that they have not been sown. It is a good plan to check over the fields to make sure that they have not been sown.

It is important that any grain harrow machine which has some mixing rollers in it be efficient in the work it is doing. It is important that any grain harrow machine which has some mixing rollers in it be efficient in the work it is doing.

One of the most important things to keep in mind while the grain is being run through the mill is that the grain should be clean. One of the most important things to keep in mind while the grain is being run through the mill is that the grain should be clean.

Western Canada Confidentially Going to Seed

"Western Canada is confidently smiling her way through one of the best seasons in her history. The grain is being run through the mill. The grain is being run through the mill.

Meeting Review

Conditions have been far from good in many sections in recent months. The grain is being run through the mill. The grain is being run through the mill.

May Make Two Of Europe

The British already, it will not be down to Canada until the spring. The grain is being run through the mill. The grain is being run through the mill.

Now They Two

Now and then an applicant for a job will get an honest estimate of his worth. The grain is being run through the mill. The grain is being run through the mill.

Alberta Fur Production

From July first, 1928, to June 30th, 1929, inclusive, the fur production of the Province of Alberta amounted to 1,069,552 skins, valued at \$1,073,445. The fur production of the Province of Alberta amounted to 1,069,552 skins, valued at \$1,073,445.

Surveying Mineral Claims

Great activity in prospecting for mineral claims is being carried on in Manitoba and Saskatchewan. The grain is being run through the mill. The grain is being run through the mill.

Managing Director: "Have you met our London manager?"

"Yes, I have. He is a very good man. The grain is being run through the mill. The grain is being run through the mill.

We feel sorry for a man with a twisted head. It usually plagues his brain.
